

Toyota Forklift Parts

Toyota Forklift Parts - In the U.S., Toyota Materials Handling inc., or TMHU, has been the best selling lift truck dealer since 1992. This business has been situated out of Irvine, California for well over 40 years, offering a wide-ranging line of quality lift trucks. With a first-rate reputation of stability and reliability, Toyota lift trucks have thrived in the competitive resources handling market. Quality is the foundation of Toyota's notorious Toyota Production System practiced at all manufacturing facilities, including TIEM, which is stands for Toyota Industrial Equipment Manufacturing, located in Columbus, Indiana. The bulk of the Toyota lift trucks sold in the U.S.A are built here.

Every one of Toyota's manufacturing facilities within Canada and the U.S. comply with the International Organization for Standardization or ISO 14001 standard. TIEM has been honored many times for its dedication to continual development, and its environmental methods. It is the first and only producer to offer EPA and CARB-certified Compressed Natural Gas powered lift trucks on the market. To illustrate, the Toyota 8-Series IC lift vehicles emit 70% fewer smog forming emissions than the current centralized EPA standards and have complied with California's strict emission standards and regulations.

TMHU, U.S.A.- Leading the Industry

The head of Toyota Material Handling, U.S.A., Brett Wood feels that TMHU's success comes from its dedication to manufacture high quality lift trucks while offering first-rate customer support and service. "We must be able to learn and predict the needs of our customers," said Brett Wood. "As a leader, our success also depends on our ability to address our customers' operational, safety and environmental cost issues."• TMHU's parent company, Toyota Industries Corporation, often known as TICO, is listed in Fortune Magazine as the world's principal lift truck dealer and is among the magazines impressive World's Most Admired Companies.

Redefining Environmental Responsibility

Toyota Industries Corporation, as the parent company, has instilled a rich corporate doctrine of environmental stewardship in Toyota. Not many other organizations and no other lift truck maker can equal Toyota's history of caring for the natural environment while simultaneously advancing the economy. Environmental accountability is a key aspect of company decision making at Toyota and they are proud to be the first and only producer to provide UL-listed, EPA- and CARB-certified Compressed Natural Gas powered lift vehicles. Yet another reason they remain a leader within the industry.

In 2006, Toyota introduced the 8-Series line. The 8-Series signifies both Toyota's innovation and leadership in the industry. It features an exclusive emission system that surpasses Federal EPA emission values, and also meets California's more involved 2010 emission standards. The finished invention is a lift vehicle that produces 70% fewer smog forming emissions than the existing Federal standards tolerate.

Moreover in 2006, Toyota established an affiliation with the Arbor Day Foundation, furthering their commitment to the environment. More than 57,000 trees have been planted in local parks and national forests damaged by ecological causes such as fires, as a product of this partnership. 10,500 seedlings have also been distributed through Toyota Industrial Equipment's network of dealers to non-profit organizations and neighborhood consumers to help sustain communities all over the U.S.

Toyota's lift vehicles provide improved productivity, visibility, ergonomics and durability, and most notably, the industry's leading safety technology. The company's System of Active Stability, also referred to as "SAS"•, helps reduce the possibility of incidents and injuries, and increasing productivity levels while minimizing the potential for merchandise and equipment damage.

System Active Stability is able to discern situations that might lead to lateral unsteadiness and potential lateral overturn. When any of these factors have been detected, the SAS will instantly engage the Swing Lock Cylinder to re-stabilize the rear axle. This alters the lift truck's stability footprint from triangular in shape to rectangular, offering a major increase in stability which substantially reduces the likelihood of an accident from a lateral overturn. The Active Mast Function Controller or the Active Control Rear Stabilizer also aids to avoid injuries or accidents while adding strength.

SAS was originally launched to the market on the 7-Series internal combustion products in 1999 and subsequently catapulted Toyota into the industry leader for safety. Ever since then, SAS continues to be built-in to nearly all of Toyota's internal combustion machines. It is standard equipment on the new 8-Series. There are more than 100,000 SAS-equipped lift trucks in operation, exceeding 450 million hours combined. The increased population of SAS-equipped trucks in the field, along with mandatory worker instruction, overturn fatalities across all models have decreased by 13.6% since 1999. Also, there has been an overall 35.5% fall in industry wide collisions, loss of control, falls and overturn from a lift vehicle for the same period.

Toyota's rigid principles extend far beyond the machinery itself. The company believes in providing extensive Operator Safety Training courses to help customers satisfy and exceed OSHA standard 1910.178. Training packages, video tutorials and a variety of resources, covering a broad scope of subjects-from personal safety, to OSHA regulations, to surface and load situations, are accessible through the supplier network.

Toyota has maintained a permanent existence in the United States ever since its first sale. In 2009, Toyota Industrial Equipment Manufacturing, created its 350,000th lift truck. This reality is demonstrated by the statistic that 99% of Toyota lift trucks bought in America today are built in the United States.

TMHU is situated in Columbus Indiana and houses nearly 1 million square feet of production facilities over 126 acres of land. Facilities include a National Customer Center, as well as production operations and supply centers for equipment and service components, with the entire investment exceeding \$113 million dollars.

The modern NCC was built to function for TMHU customers and dealers. The facility includes a 360-degree display room, a presentation theater complete with stadium seating for 32, an section for live product demonstrations with seating capability for 120; a presentation theater; Toyota's Hall of Fame showcasing Toyota's story since the birth of its originator, Sakichi Toyoda, in 1867, and lastly a instruction center.

The NCC embodies Toyota's commitment to providing top-notch client service. TMHU's 68 sanctioned Toyota Industrial Equipment, or TIE dealers, along with 189 dealership locations right through the U.S, supply the most wide-ranging and inclusive customer service and support in the industry. The company's new and Certified Used lift trucks, service, components, and financing capabilities make Toyota dealerships a one-stop shop to ensure overall client satisfaction.
