

Fork Positioner for Forklift

Forklift Fork Positioner - A fork positioner is a tool made out of high quality materials intended to be able to endure the most challenging operations and work environments. This piece of equipment can enable the person driving to be able to control the blades hydraulically without leaving the seat. Side shifting models have the added ability to laterally position the entire load or the arms so as to facilitate more accurate carrying and position in a faster and much more effective method.

The blade pocket is rather unique and can enable the person operating it to safely swing the blades into position without any worry of damaging the positioning cylinders. This could allow the operator the alternative to perform simultaneous or independent fork movement, depending on the job requirement. For most lift trucks with non-OEM carriages, complete carriages are necessary. Standard OEM carriages can be converted into blade positioners on existing units.
